1 Basic Concepts
An event is a specific occurrence involving participants. An event is something that happens. An event can frequently be described as a change of state.

We will not be tagging all events, but only examples of a particular set of types and subtypes. Specifically, we will be interested in annotating Life, Movement, Transaction, Business, Conflict, Contact, Personnel and Justice Events. Even among events of these types, we will only be interested in annotating examples of particular sets of subtypes. The types and subtypes will be more thoroughly discussed in Section 4 below.

There are two spans of text of interest when first identifying events: the event extent and the event trigger. An event extent is a sentence within which a taggable event is described. Its trigger is the word that most clearly expresses its occurrence. The specific rules for identifying the extents and triggers of events are described in Section 2 below.

In addition to the description of the event itself, we will also be identifying all of the participants of each event. An event’s participants are the entities that are involved in that event. The specific types of participants that can be involved will vary from event type to event type. We will only be annotating as participants those entities which are mentioned within the event extent. Sometimes when talking about event participants, we will refer to the event extent as its scope. For a more thorough discussion of event participants see Section 5 below.

There are frequently entities and values within the scope of an event that are not properly participants, but should be understood as ‘part’ of that event. We will refer to such entities as attributes and we will annotate those elements in a way that is very similar to the annotation of participants. For example, attributes must occur within the scope of an event to be taggable.

We will refer collectively to event participants and event attributes as event arguments. For a more thorough discussion of Event Arguments see Section 6 below.

2 Taggability

2.1 Syntactical Structures
The following subsections describe possible syntactical structures that can help determine the taggability and extent of potential event mentions.

2.1.1 Sentential predicates
主席接见了来访的官员。
该公司正式宣告破产。
他父亲退休了。
2.1.2 Nominalization
Every language has grammatical processes by which a verb, a verb phrase, a
sentence, or a portion of a sentence including the verb can function as a noun
phrase. These grammatical processes are called nominalization. In Mandarin,
nominalization involves placing the particle DE after a verb, a verb phrase, a
sentence, or a portion of a sentence including the verb.

2.1.2.1 Nominalization functioning as a noun phrase
You may remember some of the headless structures defined in EDT. The
following example actually is a nominalization functions as a noun phrase:

[首先发起攻击的]是一群武装分子。
First make attack DE is a group insurgent
Those who initiated the attack are a group of insurgents.

In EDT task, we tag [首先发起攻击的]as a PERSON mention with 的 as the head.
We need to tag the event mention or mentions if what denotes by the verb is a
taggable event.

[行凶的]已经被拘捕。
Attack DE already PASSIVE arrest
That who was trying to attack was arrested.

2.1.2.2 Nominalization modifying a head noun:
Nominalization can also serve to modify a following noun in which the noun being
modified is called the head noun. There are two types of construction involving a
moninalization modifying a head noun. Both have the form nominalization + head
noun. One can be called a relative clause construction, while the other involves a
complement to an abstract head noun.

2.1.2.2.1 Relative clause construction is a clause that restricts the reference of
the head noun. A nominalization can be called a relative clause if the head noun
that it modifies refers to some participants in the situation named by the
nominalization. The participants can be the subject, the object, as the following
describes show, the instrument, the location or time at which the event
happened, or even the reason for which or the method by which it occurred.

中国最近购得的潜艇
where 潜艇 refers to the missing object participant of 中国最近购得__
受了伤的士兵
where 士兵 refers to the missing subject participant of __受了伤
正在逮捕罪犯的警官
where 警官 refers to the missing subject participant of __正在逮捕罪犯

Interpreted as states, the first two examples can be paraphrased as 'the state of having been acquired', 'the state of having been hurt', etc. The third is slightly different. The relative clause is more directly describing an event (rather than its resulting state), but that event is being described as 'still in progress'. A paraphrase of the example might be 'the officers that are participating in the arresting event that has (had) not yet completed'

2.1.2.2.2 A nominalization serving as the complement to an abstract head noun: the most important characteristic of this noun complement construction is that the head noun is always abstract and does not refer to any participants in the modifying clause, for example:

他离婚的事
*He divorce DE thing
The event that he divorced*

美国总统辞职的新闻
*US president resign DE news
The news that the President of US resigned*

In all these examples, the head noun is abstract and does not refer to any entity in the preceding nominalization. If the event in the modifying clause is taggable, it must be tagged. So is the abstract noun, which should be tagged as nominal event mentions and the two event mentions are coreferential.

2.1.2.3 The shi…de (是…的…) construction:
Structurally, it consists of a subject followed by the copula verb shi followed by a nominalization, eg:

他是去年退休的。
*He be last-year retire DE
It was last year that he retired*

他是被车撞死的。
*He be PASSIVE car hit dead DE
It was a car that hit him dead.*

2.1.3 Nominal Premodifier
Sometimes verbs can function like adjectives and modifies nouns without having any aspect marker or the nominalization marker DE. Eg:

离婚女
*Divorce woman*

退休干部
*Retirement official
2.1.4 Serial verb construction

Serial verb construction refers to a sentence that contains two or more verb phrases or clauses juxtaposed without any marker indicating any relationship is between them. In Chinese, many sentences share the following form:

(NP) V (NP) (NP) V (NP)

The verb phrases in the serial verb construction always refer to events or states of affairs which are understood to be related as parts of one overall event or state of affairs. We can divide the types of meanings conveyed by the constructions into four groups:

i. Two or more separate events, as in:

两家公司合并成立了一家跨国集团。
Two CLS company merge found a CLS international corporation
These two companies merged and founded one international corporation

ii. One verb phrase or clause serving as the subject or direct object of another verb.

两家公司合并可以产生更大利益。

iii. Pivotal constructions in which the second NP is the direct object of the first verb and the subject of the second verb.

济南市人民检察院指控被告人王某行凶杀人。
The jury indicted Mr Wang murder
The jury indicted that Mr Want committed murder crime.

iv. Descriptive clauses: a transitive verb whose direct object is described by a following clause.

他有个妹妹最近生了个孩子。
He has a sister recently give-birth a child
He has a sister who recently delivered a baby.

2.2 Event Extent

The first step in annotating an event mention is identifying its extent. The extent of an event mention will be the entire sentence within which the event or events are described. (In the following examples, the trigger word has been indicated in bold to make the examples more clear. For a complete discussion on the choice of trigger words, please see Section 2.3).

They have been married for three years.
Her father is retired.

China's recently acquired submarines are mostly still in the South China Sea.

The rioting crowd approached the Capitol.

While the identification of event extent is not an evaluated task, it will be crucial in the annotation task. Specifically, it will determine whether or not values and entities in the text can be used as arguments in nearby events. Only entities and values within the extent of an event will be permissible arguments.

Chinese is a Subject Pro-drop language in that the subject of a clause need not be overt. For our convenience, we may define that a SENTENCE is a single clause if its subject is different from the previous clause. A SENTENCE is constituted of multiple clauses when a set of clauses linked by a topic in the form of Zero anaphora (the subjects of the clauses other than the first clause are dropped). Therefore, we can identify the missing participant in the events whose subject has been dropped. For example:

祖拉布·日瓦尼亚生于1963年12月9日，毕业于第比利斯大学生物系。2003年11月任格鲁吉亚国务部长。2004年2月被总统萨卡什维利提名为总理。

In the above example, there are four clauses, but three of them have the subject dropped. We will then treat all four clauses as a single SENTENCE, in which there are actually four event mentions.

打牌过程中，黄、刘二人发生了口角，后两人一同回到同居的住处。

Poker-game process in, Huang, Liu two guy had a quarrel, later two guy together back to cohabinate DE place
While playing poker game, Huang and Liu had a quarrel. Later these two guys went back together to their apartment.

There are two clauses whose subject participants are both overt in the above example. Hence they should not be treated as one sentence, even though the subjects of each clause are coreferential.

2.3 Event Timestamping

The extent of event is crucial for timestamping. If an event is associated with a temporal expression which is in the scope of that event, the event should be timestamped with the temporal expression. For taggable temporal expression, refer to “TIDES 2003 Standard for the Annotation of Temporal Expressions”. For detailed discussion on timestamping, refer to “Timestamping of ACE Relations and Events”.

ACE Chinese Event Guidelines V5.5.1
2005.07.01
Here are some examples of timestamping for event:

胡锦涛主席定于下月 16 日和新党主席宋楚瑜在北京会谈。
Event: contact-meeting(person: 胡锦涛, 宋楚瑜; place: 北京; time-within: 下月 16 日)

历时 32 年的战争终于结束了。
Event: conflict-attack(time-holds: 32 年)

A lot of cases there is a time in the extent of an event, but the time is not a direct adjunct of the event mention, but rather implicitly related to the event mention, we need to base on our intuition to judge whether the temporal expression should be stamped on the event. If there is reasonable interpretation of the sentence in which the event occurs referring to the temporal expression, it then should stamp with the time. In cases of confusion, we apply the "Locality" rule:

Whenever the TIMESTAMP might apply to several Events equally well, we will assume that the TIMEX2 mention attaches only to the most syntactically local Event, unless there is clear evidence to the contrary from the context.

Note that in Chinese, the temporal expression usually does not appear at the end of a sentence.

周六晚上, 布什总统离开华盛顿前往巴黎同欧盟领导会谈。
Event: Movement (person: 布什总统; origin: 华盛顿; destination: 巴黎; time: 周六晚上)
Event: Contact-meeting(person: 布什总统, 欧盟领导; place: 巴黎)

布什总统周六晚上离开华盛顿前往巴黎同欧盟领导会谈。
Event: Movement (person: 布什总统; origin: 华盛顿; destination: 巴黎; time: 周六晚上)
Event: Contact-meeting(person: 布什总统, 欧盟领导; place: 巴黎)

布什总统离开华盛顿前往巴黎，准备周六晚上同欧盟领导会谈。
Event: Movement (person: 布什总统; origin: 华盛顿; destination: 巴黎)
Event: Contact-meeting(person: 布什总统, 欧盟领导; place: 巴黎; time: 周六晚上)

2.4 Event Triggers:
The following subsections describe the process for identifying the triggers of events.
2.4.1 Annotating event triggers

2.4.1.1 Simple triggers
An event’s trigger is the word (in its scope) that most clearly expresses its occurrence. In many cases, this will merely be the main verb in the part of the sentence (extent) that most directly describes the event. The verb phrase in any language is the nucleus of a sentence. Verbs describe events, actions, states, change of states, and experiences, and verbs presuppose the presence of noun phrases that refer to the participants in those events. The type and number of participants for each verb are determined to a large extent by the meaning of that verb.

在这次袭击中，20 人死亡，7 人受伤。

他于昨天因病去世。

1994 年他与一个美国华侨结婚。

In passive construction bei-zi-ju the verb is the trigger of an event.

17 个水手被杀了。
17 CLS sailor PASSIVE kill
17 sailors were killed

他因贪污受贿被判无期徒刑。

Other times, the event reference is used in a modifier position, in the form of nominalization (refer to 2.1.2). In such cases, the verb in the nominalization should be annotated as the trigger for the event:

对于造成 81 人丧生的中正国际机场空难事件，新航将付起全部责任。

赵明禄将是访问美国的朝鲜最高级别政府官员。

We will also see cases where the event is triggered by a noun or pronoun:

这场骚乱导致 54 人受伤。

双方领导人高度赞扬了这次会晤取得的成果。

祖拉布·日瓦尼亚 2004 年 2 月被总统萨卡什维利提名为总理，同月议会批准了该提名。

(Note: the argument participants of the event mention should be in the same scope of the event extent. In no case can we pick the argument participants outside of the extent of the event mention.)
2.4.1.2 Verb-resultative compound in Chinese

A lot of verb phrases in Chinese are verb compound with two characters, with the first one indicating the action and the second one indicating the result, as the following example shows:

警察击毙了歹徒。
Police shoot kill ASP person who committed crimes
Police shot the person(s) who committed crimes to death.

In the above example there are actually two events with a single verb phrase. We are going to tag two events in such case, with each character as a trigger. Hence, in the above example,  is the trigger for a Conflict-Attack event, while  is the trigger for a Life-Death event. The extents and arguments of the two events are the same.

2.4.1.3 Verb coordination without conjunctive in Chinese

Two verb can conjoined without conjunctive in Chinese, such as 伤亡 or 死伤. These verb phrases trigger two events—DIE and INJURE. We are going to tag two events with each character as the trigger of such event. So 伤 is the trigger for Life-Injure event, while 死 is the trigger for Life-Death event.

联合国秘书长佩雷斯・德奎利亚尔今天对多国部队空袭巴格达造成平民伤亡表示悲痛。
Secretary of UN Peras today expressed his sorry and sadness to the Iraqi civilian injury - death due to the bombing of multination allies army.

苏联为战胜德国侵略者作出了巨大牺牲，伤亡近2800万人。
Soviet Union paid too much to fight against German invaders. Around 2.8 million people injured-died.

2.4.2 Event nominalizations and pronominalizations

As noted in Section 2.3.1, events can be triggered by verbs, nouns etc. It is worth noting that nominal events can occur as premodifiers:

该公司已向法院提交了破产申请。

双方这次会晤议题是加强军队交流和合作。

Nominal and pronominal anaphors of events are taggable as mentions of that event, as in:

以色列士兵当日攻击了哈马斯的总部。这直接引起的哈马斯的又一轮报复行动。

恐怖分子于2001年9月11日对美国本土发动了恐怖袭击。这一事件对美国乃至全世界产生了深远的影响。
这 and 这一事件 clearly refer back to the CONFLICT-ATTACK event in the previous sentence and should therefore be tagged as event mentions. Their types and subtypes, however, are indicated by mentions outside the scope of the event extent.

Finally, there are some nouns that refer to event participants and simultaneously imply the occurrence of an event, such as 被提名人 or 受害人. These should not be tagged as event mentions for two reasons: 1) 被提名人 does not refer to an event in the same way that 提名, and even anaphors like it, do; and 2) 被提名人 and other event participants will already be annotated as entities, and we want to avoid tagging an item as both an entity and an event mention.

Notice that sometimes we can annotate events whose potential noun triggers are entity heads by using the main verb as a trigger:

The crash claimed at least 30 lives.

此次空难夺去了 81 人的生命。

2.4.3 Annotating complex examples

Most of the rules for identifying event triggers discussed so far seem to work fairly well for the more simple examples. But the real challenge is to use these rules consistently for the complex cases as well.

There are two major potential sources of event trigger complexity in a typical sentence.

1. There is an event that is mentioned by multiple words within the same scope, in a way that cannot be reliably ‘decomposed’. A good example of this is:

The leaders held a meeting in Beijing.

双方领导人在北京举行了会谈。

2. There are a number of distinct events mentioned within the same scope (either all taggable events or a mix of taggable and non-taggable events). A good example of this is:

The attack killed seven and injured twenty.

这次武装袭击导致 7 人丧生，20 人受伤。

Decision rules for distinguishing between examples of these two cases are presented in Section 2.3.3.2 below.
2.4.3.1 Multiple Possible Triggers

There will be a number of cases where the choice of the appropriate trigger word is ambiguous. The following subsections describe the rules for choosing between the various options.

2.4.3.1.1 Verb+Noun

While many events anchor on a single verb or noun, there are some problematic cases where multiple words could reasonably be called the trigger:

- Foo Corp. had previously filed Chapter 11 in 2001.
- 该公司在 2001 年曾申请破产。

- The leaders held a meeting in Beijing.
- 双方领导人在北京举行了会谈。

- The company was ordered to pay a fine of $300,000.
- 该公司被勒令缴纳 30 万美元罚款。

In each of these examples, we could reasonably select either of the indicated words to act as the trigger. Indeed, most people would argue that the two words ‘work together’ in a way that is not quite compositional. In other words, the event in the first example might be understood as having been triggered not by filed, but by filed Chapter 11.

In cases where more than one trigger is possible, we will simply select the noun whenever that noun can be used by itself to refer to the event. In what follows, we will refer to this rule as the stand-alone-noun rule.

- Foo Corp. had previously filed Chapter 11 in 2001.
- 该公司在 2001 年曾申请破产。

- The leaders held a meeting in Beijing.
- 双方领导人在北京举行了会谈。

- The company was ordered to pay a fine of $300,000.
- 该公司被勒令缴纳 30 万美元罚款。

- In April of last year, the CR Company began bankruptcy procedures.
- 去年 4 月，该公司启动破产程序。

- The union began its strike on Monday.
- 工会星期一开始罢工。

- Insurgents launched a new attack in Baghdad.
- 武装分子在巴格达发起了又一轮进攻。
Other times the two items will actually be triggers for two separate events:

- **He prevented the assassination.**
  他成功地阻止了这场暗杀行动。

- **Protestors interrupted their meeting.**
  抗议示威者打断了他们的会谈。

- **An officer witnessed the attack.**
  一位警察目击了这一袭击。

- **In accepting the nomination he spoke of his immigrant ancestors.**
  接受提名时，他谈及了他的移民祖先。

A full discussion of how to distinguish two potential triggers for the same event from two separate events is provided in Section 2.3.3.2 below.

### 2.4.3.1.2 Triggers in Serial Verb Construction

As discussed in 2.1.3, two or more verb phrases or clauses can be juxtaposed in a sentence. There are cases in which the verbs convey different events. In this case, each verb is a trigger of an event mention.

- **两家公司合并成立了一家跨国集团。**
- **济南市人民检察院指控被告人王某行凶杀人。**

There are cases where several verbs are used together to express an event. In such cases, the verb that denotes the event will be annotated as the trigger. It expresses the type of event most clearly. Non-main verbs are normally verbs such as the verb ‘有’ and *modals*. Chinese modals are auxiliary verbs. Here is a list of auxiliary verbs:

- **Ought to, should:** 应该，应当，该
- **Be able to:** 能，能够，会，可以
- **Has permission to:** 能，可以
- **Dare:** 敢
- **Be willing to:** 肯
- **Must, ought to:** 得，必须，必要，必得
- **Will, know how:** 会

Some other verbs such as ‘要求’, ‘企图’ and ‘打算’ etc. will also play a non-main verb role in complex verbal constructions.

- **Terrorist groups have threatened to kill foreign hostages.**
  恐怖组织威胁要杀死外国人质。

- **U.S. forces continued to bomb Fallujah.**
  美国军队继续炮轰法鲁耶。
John Hinkley attempted to **assassinate** Ronald Reagan.
约翰辛吉利企图暗杀里根总统。

AOL agreed to **buy** Time Warner.
美国在线同意收购时代华纳。

### 2.4.3.2 Multiple Events within a single scope (sentence)
Cases where there are multiple possible triggers for the same event within the same scope (i.e. sentence) should not be confused with cases where there are multiple events expressed within the same sentence.

For example, **ATTACK** nouns often seem to act as agents in other events. In the following examples, each bold-faced word is a trigger to an independent event and therefore should be tagged as such:

*The attack killed* seven and *injured* twenty.
武装袭击导致 7 人死亡，20 人受伤。

*The explosion claimed* at least 30 lives.
爆炸夺走了至少 30 人的性命。

*The explosion left at least 30 dead.*
爆炸导致至少 30 人死亡。

For these examples, there will be more than one event with the same extent, but each event will have its own trigger. (For a detailed discussion of the difference between the second and third examples, see Section 2.3.2 above.)

Sometimes, multiple events will be triggered by multiple resultative adjectives sharing a single support verb (the triggers are indicated in **bold** and the support verb with *underlining*):

*The explosion left at least 30 dead and dozens injured.*

Frequently, the other ‘events’ in the same scope as some event trigger are not of a taggable type. In the following examples, triggers of taggable events are indicated in **bold** and triggers for non-taggable events are indicated with *underlining*:

*An officer witnessed the attack.*

*Protestors interrupted their meeting.*

---

1 Here we are using ‘taggable’ to imply that an event of ‘of a taggable type’. For a complete presentation of which event types are taggable, please see Section 4 below.
He prevented the assassination.

Intuitively, these verbs signal separate events because, for example, the 'witnessed' event is not part of the ATTACK event.

In many cases, we can simply apply the stand-alone-noun rule (or the stand-alone-adjective rule) and ignore the question of whether a verb and noun (or adjective) within the same scope refer to the same exact event. Indeed, for all of the examples in the last set this assumption works perfectly well. The common property is that the events expressed by the main verb are different, but nontaggable events. For these cases, the simple stand-alone rules will work quite well.

There are, however, plenty of examples where the question is not so clean-cut:

The attack killed seven and injured twenty.

It will be important to recognize that there are three events described here. For a complete presentation of the decision rules for distinguishing multiple events from events with multiple potential triggers, please see Section 2.3.3.2 below.

Only entities can act as arguments of events. Despite intuitions about the relationship between 'attack' and 'killed' in:

The attack killed seven and injured twenty.

We will not allow events to act as arguments in other events.2

2.4.3.2.1 Distinguishing multiple events from multiple potential triggers (for a single event)

Sentences containing multiple events should be distinguished from sentences containing multiple potential triggers for the same event.

Sometimes, the tests are unnecessary and the decision can be made using only the stand-alone-noun rule or the stand-alone-adjective rule (described in Section 2.3.3.1, above):

He calculated that Jesus' birth had occurred 532 years earlier.

For these cases, the 'secondary event' (the 'event' expressed by the main verb) will be ambiguous between: (a) an additional potential trigger for the event picked-out by the noun (or adjective); and (b) a trigger for a separate, but un-taggable event (an event which is not an example of a taggable event type).

---

2 Such information will later be encoded using Event-Event relations.
Whenever the main verb is ambiguous in precisely this way, we will simply apply the stand-alone-noun rule (or the stand-alone-adjective rule) and move on.

There are, however, plenty of cases where the ambiguity of the main verb is between (a) an additional potential trigger for the event picked-out by the noun (or adjective); and (b) a trigger for a separate, taggable event (an event which is an example of a taggable event type). For example:

*A Palestinian worker was shot dead in the Gaza Strip*

*The attack killed seven and injured twenty.*

There are a number of simple tests that can provide guidance in making the decision about whether the two potential triggers refer to the same event or to different events.

1. One test is to ask whether the person doing the one event is the same as the person doing the other. If not, then we are dealing with two separate events.
2. A second test is to ask whether the one ‘event’ is a (smaller) part of the other. If so, then we are dealing with two separate events.
3. A third test is to ask whether the one ‘event’ is describing the ‘internal structure’ of the other. If so, then we are dealing with two separate events.
4. **When in doubt, assume that there are two separate events.**

2.4.3.2.2 Coreference and Taggability

Ambiguous triggers (such as “the deal” or “this opportunity for peace”) should only be tagged when they are clearly co-referent with an unambiguous trigger within the same document. By clearly co-referent, we mean:

1. The ambiguous reference should encompass no more than the event described by the unambiguous reference. For example, *the peace process* clearly contains more than just the *MEET* event described by *the peace talks*, so *the peace process* is not taggable as another mention of *the peace talks*.

2. There should some explicit syntactic or lexical evidence for coreference, such as a copula construction, an appositive, or a definite article or demonstrative adjective modifying the ambiguous reference. (Pronominal references are also valid.)

3. Preferably, there should also be some semantic relationship between the ambiguous and unambiguous triggers (e.g. deal/merger or crime/killing).
For a complete discussion of Event Coreference, see Section 4 below.

3 Polarity, Tense, Genericity, and Modality
In addition to their type and subtype, events will have a number of properties related to, e.g., when and if the event really took place.

Currently we will tag the features GENERICITY, TENSE, POLARITY, MODALITY and. The full lists of values for each feature and brief definitions of each are provided in the subsections which follow.

3.1 Polarity
An event is NEGATIVE when it is explicitly indicated that the event did not occur (see examples). No inference can be used; the non-occurrence of the event must be explicitly and intentionally communicated. All other events are POSITIVE.

NEGATIVE examples (using negative word):

His wife was sitting on the backseat and was not hurt.
他太太坐在后座上，没有受伤。

He no longer sells drugs.
他再也不贩卖毒品了。

Kimes’ main demand was that his mother not be extradited to California.
他的唯一要求是他妈妈不被逐出加州。

NEGATIVE examples (using context):

他们在最后一刻退出收购。
嫌疑犯拒捕。
警方又一次粉碎了对总统的暗杀企图。

3.2 Tense
TENSE is determined with respect to the speaker or author. We will refer to the time of publication or broadcast as the textual anchor time. Let t0 be the textual anchor time:

<table>
<thead>
<tr>
<th>TENSE</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Past</td>
<td>For events that have already occurred at t0</td>
</tr>
<tr>
<td>Present</td>
<td>For events that occur at t0</td>
</tr>
<tr>
<td>Future</td>
<td>For events that have not yet to occur at t0</td>
</tr>
<tr>
<td>Unspecified</td>
<td>Whenever the TENSE of an event cannot be determined from the context</td>
</tr>
</tbody>
</table>

PAST examples:
他9月底去了一趟休斯敦。

他被迫交了赎金。

对1991年未遂暴动的调查

警方说他们可能早已潜逃出境。

PRESENT examples:

该航空公司正在进行从空中客车购买新型飞机的交易。

他不再从事毒品买卖。

FUTURE examples:

俄罗斯和美国的贸易官员将于5月17日在伦敦会晤。

朝鲜宣布将中止六方会谈。

欧盟计划开放对中国的武器出口。

Whenever the TENSE of an event cannot be determined from the context, we will use UNSPECIFIED.

3.3 Genericity
An event is SPECIFIC if it refers to whenever it is understood as a singular occurrence at a specific place and time. All other events are GENERIC.

GENERIC Examples:

该组织专门从事武器走私。

自2008年起总统将不再由公民直选，而是由议会选举。

阿巴斯还下令巴勒斯坦所有安全机构总动员，采取切实措施维护巴勒斯坦地区的安全秩序，并防止巴武装人员继续袭击以色列目标，破坏巴以达成的停火协议。

3.4 Modality
An event is ASSERTED when the author or speaker makes reference to it as though it were a real occurrence.

他9月底去了一趟休斯敦。
一辆汽车炸弹星期四在耶路撒冷市中心发生爆炸，警方称至少两人在爆炸中丧生。

All other events will be annotated as OTHER. Some examples of OTHER modalities include, but are not limited to:

1. **Believed** Events

   国防部相信部分核燃料已运抵平壤。
   警方有充分理由相信该机构多次为阿卡达组织捐款。

2. **Hypothetical** Events:

   他要是不及时交纳赎金，就会有杀生之祸。

3. **Commanded** and **Requested** events:

   官方告诫人们不要搭乘轮渡。

4. **Threatened,** **Proposed** and **Discussed** events:

   歹徒威胁要杀死他。

5. **Desired** events:

   他们去年就打算收购这家公司。

6. **Promised** events:

   欧美国家许诺的捐款

7. **Other:**

   美国担心本土挥发发生新一轮恐怖袭击。

4 Event Coreference

When two event mentions refer to the same event, then they corefer. For example:

恐怖分子于2001年9月11日对美国本土发动了恐怖袭击。**这一事件**对美国乃至全世界产生了深远的影响。

**这一事件**和**袭击**both refer to the Conflict-attack event. They should corefer.
两国首脑今天在巴黎举行会谈。双方在会谈中讨论了中东和平问题。

会谈 in both sentences are referring to the same event and should be treated as coreferences.

We will restrict the coreference relation to event identity. We will not identify events as coreferent when one mention refers only to a part of the other.

When it doubt, do not mark any coreference.

When there is a mention of a “plural” event (usually an event with multiple participants like a double murder or a conviction of several people), then the plural event mention is not coreferent with mentions of the component individual events.

For example the following two event mentions do not corefer:

这一犯罪团伙的所有成员都被定罪。犯罪团伙头目因组织犯罪被定罪。

Nor do the following:

歹徒开枪打死商店老板和在场顾客徐某。徐某的死给他的家人带来了巨大的损失。

There will also be cases where the arguments are modally questionable. Since modality is not considered in the selection of arguments, this will not have an effect on coreference.

For example, the following two event mention will be annotated as coreferent:

李四在广州被杀……张三被指控杀了李四。

For a complete discussion of the constraints on Argument selection, see Section 6 below.

5 Event Types and Subtypes
Each event type and subtype will have its own set of potential participant roles for the entities which occur within the scopes of its exemplars. In some cases, the question of whether or not a potential event is taggable will depend on the presence or absence of entities filling certain of these roles. (Although, this requirement will be loosened for cases of nominal anaphora --- for both Pronouns and Definite Descriptions.) These participant roles will be described in more detail in Section 5 below.
5.1 Life

5.1.1 Be-Born
A BE-BORN event occurs whenever a PERSON entity is given birth to. Please note that we do not include the birth of other things or ideas.

Examples

李傻傻，原名蒲荔子，生于1981年11月，湖南隆回人。

一名出生仅7天的女婴被重复接种了卡介苗，家人又急又怕又急。

譬如出生在北京，叫"京生"；出生在台湾，叫"台生"。

5.1.2 Marry
MARRY events are official events, where two people are married under the legal definition. (Note: dual marriage: an illegal activity of getting married again without terminating the previous marriage official register for marriage and wedding ceremony are also be tagged as Marry events, but not fake marriage.)

Examples

杨振宁与翁帆在汕头登记结婚。

2003年10月18日，天津师范大学大三学生王洋同她的未婚夫天津大学博士生刘航领取了结婚证书，五月一日，王洋举行了婚礼。

美国大兵不顾上级反对与伊妇女结为夫妻惹麻烦。

5.1.3 Divorce
A DIVORCE event occurs whenever two people are officially divorced under the legal definition of divorce. We do not include separations or church annulments.

Examples

离婚女向前夫讨宠物探视权。

反对那些轻易的选择离婚来逃避婚姻问题的人。

5.1.4 Injure
An INJURE event occurs whenever a PERSON entity experiences physical harm. INJURE events can be accidental, intentional or self-inflicted. (Note: being poisoned by food or chemical is also an INJURE event.)
Examples

香港地铁车厢内发生火灾受伤入院人数增至 14 人

美国一核潜艇触礁 20 人受伤

外交部公布在泰国地震中受伤的中国游客名单

加班途中车祸受伤属工伤

829 名学生食物中毒入院治疗

巴民族权力机构前主席阿拉法特一年以前就已中毒

5.1.5 Die

A **DIE** event occurs whenever the life of a **PERSON** entity ends. **DIE** events can be accidental, intentional or self-inflicted. (Note: we will not tag **DIE** if there is not elicit mention of death, but funeral of a person?)

Examples

美国著名艺术家托比去世

多哥总统埃亚德马当天因心脏病突发而逝世

阿拉法特侄子首次披露阿翁可能死于谋杀

一些国家谴责多国部队屠杀无辜。

5.2 Movement

There will be only one subtype of **MOVEMENT** events: **TRANSPORT**.

A **TRANSPORT** event occurs whenever an **ARTIFACT** (WEAPON, VEHICLE) or a **PERSON** is moved from one **PLACE** (GPE, FACILITY, LOCATION) to another.

**Note:** This event is taggable only when the object is known to be a taggable **ARTIFACT** or **PERSON**.

**Note:** Either the origin or destination must be explicit somewhere in the document for a **TRANSPORT** event to be taggable.

**Note:** We will only tag **TRANSPORT** events when the movement is explicit.
Note: *EXTRADITE* and *MEET* events are treated independently as their own type. *EXTRADITE* examples should be clear from context (see Section 5.8.10, below).

Note: Most *visit* examples will be tagged as *MEET* events (see Section 5.6.1 below). The following example would, therefore, be tagged as a *MEET* event (and not as a *TRANSPORT* event):

**Fred visited Harry in New York on Friday.**

** Decision rules to Distinguish *TRANSACTION* from *MOVEMENT*:**

1. What is being transferred and is it a taggable vehicle or weapon?
   
   If so, then the event is taggable.
   
   If not, then the event is not taggable.

2. Is there a change in ownership?

   If so, then the event is a *TRANSFER-OWNERSHIP* event.

   If not, then the event is a *MOVEMENT* event.

**Examples**

深圳地铁首日开通运送乘客11万人次创下纪录。

政府军节节撤退加勒比岛国海地局势急转直下。

美军将来几小时内将伊拉克前总统萨达姆从伊拉克转移至位于卡塔尔首都多哈附近的奥代德军事基地。

北京也考虑动用军事力量阻止美国将先进武器运往台湾。

沙龙今天飞抵华盛顿，将和美国领导人举行会谈。

**5.3 Transaction**

5.3.1 Transfer-Ownership

*TRANSFER-OWNERSHIP* events refer to the buying, selling, loaning, borrowing, giving, or receiving of artifacts or organizations. (What about loaning/borrowing of players of sport team or land?)
Note: These events are taggable only when the thing transferred is known to be a taggable VEHICLE, FACILITY, ORGANIZATION or WEAPON.

Note: When the thing transferred is an ORGANIZATION, the SELLER-ARG will be filled only rarely; it exists for cases like X Inc. sold its Y division to Z Corp. In the more usual case of A Corp. purchased B Corp., A Corp. is the BUYER-ARG, B Corp. is the ORG-ARG, and there is no SELLER-ARG.

Note: If someone is selling unspecified "materials," and later in the article those materials turn out to be weapons, then there is a taggable TRANSFER-OWNERSHIP event. However, if someone is selling unspecified "materials" that turn out to be tulip bulbs, then there is no TRANSFER-OWNERSHIP event.

Note: Seizing a facility will count as a TRANSFER-OWNERSHIP event, but securing a facility will not.

Examples

朝鲜很可能从巴基斯坦或一个前苏联加盟共和国那里，购买了一枚原子武器和全套装置。

鄂州一司机将购得的货车假扮成军车

秘报严厉批评美国向台湾出售先进武器

卡塔尔已经准备将经常充当阿拉伯反美武装“喉舌”的半岛电视台转手出售。

??日本政府以每年约2200万日元的租金向一日本‘岛民’租借钓鱼岛等三个无人岛，以加强对这三个岛的管理。

徐安贤外出赶赌，以每天200元以上的价格向熟人租借私家车。

Decision rules:

1. What is being transferred and is it a taggable vehicle, or weapon?
   If so, then the event is taggable.
   If not, then the event is not taggable.

2. Is there a change in ownership?
   If so, then the event is a TRANSFER-OWNERSHIP event.
If not, then the event is a \textit{TRANSPORT-ARTIFACT} event.

\textbf{5.3.2 Transfer-Money}

\textit{TRANSFER-MONEY} events refer to the giving, receiving, borrowing, or lending money when it is not in the context of purchasing something. The canonical examples are: (1) people giving money to organizations (and getting nothing tangible in return); and (2) organizations lending money to people or other orgs.

\textbf{Note:} We will annotate \textit{extortion} as a \textit{TRANSFER-MONEY} event only when the amount of money is explicitly specified.

\textbf{Note:} The transfer of stock is not taggable as a \textit{TRANSFER-MONEY} event, even when it is expressed in terms of a monetary value.

\textbf{Examples}

安锋集团当年向“中华开发”申请资金\underline{借贷}

前“总统”李登辉承诺“\underline{金援}”安锋35亿元

联邦政府2005年1月6日决定向东南亚遭受海啸袭击的受灾地区提供5亿欧元的\underline{援助}

他们接受每笔上限为25万美元的\underline{捐款}

他们\underline{掏钱}的目的就是为了能够参加总统就职典礼

** I paid $9 for the movie ticket. (not taggable)**

\textbf{5.4 Business}

\textbf{5.4.1 Start-Org}

A \textit{START-ORG} event occurs whenever a new \textit{ORGANIZATION} is created. Mergers are treated independently as \textit{MERGE} events.

\textbf{Note:} This event type will only be taggable in case the ORG being started did not previously exist as a discrete unit. The independence of a state or province from its containing GPE, or the spin-off of a Subsidiary ORG into an independent ORG of its own *do not* count as \textit{START-ORG} events.

\textbf{Note:} When an ORG opens new branch office, this will be annotated as a \textit{START-ORG} event.
Note: When a new ORG results from the merger of two pre-existing ORGs, this will be annotated as a START-ORG event.

Examples

云南大学法学院大三的男生陈俊耕在 2004 年这个暑假 成 立了自己的公司

马丁·伯顿和马克·布莱戴尔 创办了一家名为 2MB 运动管理公司

5.4.2 Merge-Org

A MERGE-ORG event occurs whenever two or more ORGANIZATION entities come together to form a new ORGANIZATION entity. This event applies to any kind of organization, including government agencies. It also includes joint ventures. (Note: the merger of departments of a corporation is also an MERGE-ORG event.)

Note: The temporary closure of Organizations or their Facilities will not be annotated as END-ORG events.

Examples

中国建筑材料科学研究院、中国轻工业机械总公司 并 入 中国建筑材料集团 公司；

中国水利电力对外公司 并 入 中国水利投资公司。

不到两年时间就通过重组 兼 并 减少了近一成企业

惠普宣布，将把打印成像部门和 PC 部门 合 并 为一个部门 IPSG

5.4.3 Declare-Bankruptcy

A DECLARE-BANKRUPTCY event will occur whenever an entity officially requests legal protection from debt collection due to an extremely negative balance sheet.

Examples

在未能就重建规划与工会达成一致后，大宇公司宣布 破产。

北京“王麻子”剪刀宣布 破产 清算工作展开。

对昔日的荣华，李云福不愿多提，两年多前生意上一次失误，让他 失去了 所有的财产，
5.4.4 End-Org
An END-ORG event occurs whenever an ORGANIZATION ceases to exist (in other words ‘goes out of business’). Mergers are treated independently as MERGE events.

Examples

4 年打拼现金耗尽，一家著名游戏公司关门

5.5 Conflict

5.5.1 Attack
An ATTACK event is defined as a violent physical act causing harm or damage. ATTACK events include any such event not covered by the INJURE or DIE subtypes, including events where there is no stated agent. The ATTACK event type includes less specific violence-related nouns such as ‘conflict’, ‘clashes’, and ‘fighting’. ‘Gunfire’, which has the qualities of both an event and a weapon, should always be tagged as an ATTACK event, if only for the sake of consistency. A ‘coup’ is a kind of ATTACK (and so is a ‘war’).

Note: For Events that where a single common trigger is ambiguous between the types LIFE (i.e. INJURE and DIE) and CONFLICT (i.e. ATTACK), we will only annotate the Event as a LIFE Event in case the relevant resulting state is clearly indicated by the construction. This rule will not apply when there are independent triggers.

For example in:

Three Palestinians were shot dead.

there are two Events:

Ev1: shot (CONFLICT.ATTACK)
Ev2: dead (LIFE.DIE)

Note: Terrorism and terrorist activities will be taggable as ATTACK events. However military operations (军事行动) will not.

Note: The resulting damage caused by an ATTACK event is not itself taggable as an ATTACK event.

Examples
5.5.2 Demonstrate
A DEMONSTRATE event occurs whenever a large number of people come together in a public area to protest or demand some sort of official action. DEMONSTRATE events include, but are not limited to, protests, sit-ins, strikes, and riots.

Examples

雅典发生反美大游行

大约有一万人参加了示威活动

俄罗斯社会环保联盟、环保防御与苹果党今天在莫斯科市俄罗斯国会下议院门口举行反核示威

韩国公务员大罢工140人被捕更大罢工即将爆发

中正纪念堂前的学生绝食静坐已超过173个小时

5.6 Contact

5.6.1 Meeting
A MEETING is an intentional gathering (of two or more people) where people interact with one another and it is clear that the meeting is physically located somewhere. In other words, the meeting must be known to be face-to-face in order for it to be taggable.

A direct consequence is that the following is NOT taggable:

"GM is in talks with Chrysler to Purchase Jeep."
It is not clear that these talks are all (face-to-face) meetings, so we cannot tag this example.

**Note:** Affairs and long-term relationships do not count as *MEET* events.

**Examples**

2 月 1 日，正在牙买加进行正式访问的中国国家副主席曾庆红在金斯敦会见牙买加总督库克。

8 月 9 日上午，中国科学院副院长陈竺在院机关会见了来访的波兰科学院副院长 Jan Strelau 教授、波兰心理学校校长 Andrzej Eliasz 教授及其随行人员。

中国国家主席胡锦涛与罗马尼亚总统伊利埃斯库 13 日下午在布加勒斯特举行会谈。

“上海合作组织”成员国总理在阿拉木图举行首次会晤。

伊拉克前总统萨达姆 16 日首次获准与自己的辩护律师会面。

### 5.6.2 Phone-Write

A *PHONE-WRITE* event occurs when two or more people directly engage in discussion which does not take place ‘face-to-face’. To make this event less open-ended, we limit it to written or telephone communication where at least two parties are specified. Communication that takes place in person should be considered a *MEET* event. The very common *PERSON told reporters* is not a taggable event, nor is *issued a statement*. A *PHONE-WRITE* event must be explicit phone or written communication between two or more parties.

**Examples**

外交部长李肇星 20 日打电话给中国驻伊拉克大使杨洪林。

中国共产党中央委员会 3 日致电越南共产党中央委员会.

?? 而当国内随即回电该团时，却无法接通。

杨振宁博士的家乡水乡古镇三河，向杨振宁和翁帆发出贺信。

西门子董事长给员工发邮件警告将进行裁员。

布什总统致电伊拉克领导人祝贺大选成功。
** John received an e-mail. (not taggable)

** Smith told reporters... (not taggable)

** Hamas issued a statement... (not taggable)

** The group announced... (not taggable)

** Bush spent most of the day on the telephone and in meetings, moving ahead at lightning speed putting together his administration. (not taggable)

5.7 Personnel

All PERSONNEL events can have a POSITION attribute. The object populating the POSITION-ARG slot in a PERSONNEL event will be a VALUE of type JOB-TITLE, which consists of a string taken from within the scope of the event.

For example, in:

Mary Smith joined Foo Corp. as CEO in June 1998,

The POSITION-ARG of the event is the JOB-TITLE value populated by the string CEO.

A complete description of the role that a POSITION-ARG plays in a PERSONNEL event is provided in Section 6.8 below. The manner in which values are annotated is provided in the Values Guidelines (Values_Guidelines_v1.1.doc).

5.7.1 Start-Position

A START-POSITION event occurs whenever a PERSON entity begins working for (or changes offices within) an ORGANIZATION, FACILITY or GPE. This includes government officials starting their terms, whether elected or appointed.

Note: In general we will not annotate large-scale economic trends in employment such as a job creation.

德国慕尼黑市长受聘南开大学客座教授

"中星微"高薪聘用IC班全额奖学金获得者

西曼先生于1997年加入SAP中国公司，担任大中国区总裁，主管SAP在中国大陆、香港及台湾地区的业务。
5.7.2 End-Position
An END-POSITION event occurs whenever a PERSON entity stops working for (or changes offices within) an ORGANIZATION, FACILITY or GPE. The change of office case will only be taggable when the office being left is explicitly mentioned within the scope of the event. This includes government officials starting ending terms, whether elected or appointed.

Note: While layoffs will be annotated as END-POSITION events, in general we will not annotate large-scale economic trends in employment such as a loss of jobs.

Examples
白宫首席大厨称因无法满足第一夫人要求被解雇
他在离任后无意继续从政
Yahoo 公司前首席执行官 Tim Koogle 已经从该公司董事会辞职。
德国胡玛纳公司解雇四名豆奶粉事件责任人

5.7.3 Nominate
A NOMINATE event occurs whenever a PERSON is proposed for a START-POSITION event by the appropriate PERSON, through official channels.

Examples
美国总统布什 16 日正式提名国家安全事务助理赖斯为新一届政府的国务卿
但因家庭保姆出现问题，克里克自动放弃提名

5.7.4 Elect
An ELECT event occurs whenever a candidate wins an election designed to determine the PERSON argument of a START-POSITION event. (Note: political party winning an election is not a taggable event.)

Examples
杀人嫌疑犯被选为巴西一城市市长
选前民调显示巴勒斯坦解放组织主席阿巴斯笃定胜选

国务院任命何厚铧为澳门特区第二任行政长官
5.8 Justice

Many JUSTICE events can have a CRIME-ARG attribute. As with the POSITION-ARG in PERSONNEL events, these argument slots will be filled by values.

A complete description of the role that a CRIME-ARG plays in a JUSTICE event is provided in Section XXX below. The manner in which values are annotated is provided in the Values Guidelines.

Please note that some JUSTICE event subtypes seem to permit actions by non-state (extra-governmental) organizations. For example, one can imagine tagging the release of hostages by some paramilitary or terrorist group as a JUSTICE.RELEASE event. As the name of the containing type suggests, this will not be permissible. We will only annotate as JUSTICE events those occurrences that can be tied to the legal system of some taggable GPE entity.

5.8.1 Arrest-Jail

A JAIL event occurs whenever the movement of a PERSON is constrained by a state actor (a GPE, its ORGANIZATION subparts, or its PERSON representatives).

An ARREST event occurs whenever a state actor (GPE, ORGANIZATION subpart, or PERSON representative) takes official custody of a PERSON entity for the purposes of evaluating legal liability in a criminal activity.

ARREST-JAIL events can have a CRIME-ARG attribute filled with a string from the text. For example:

Scott Peterson was arrested for the murder of his wife.

In the above example, the CRIME-ARG is a CRIME value populated by the string murder. A complete description of the role that a CRIME-ARG plays in a JUSTICE event is provided in Section 6.9 below.

Note: Serving a sentence will be annotated as an ARREST-JAIL event.

Examples

白俄罗斯安全部门8日宣布，一名俄罗斯安全部门官员和另外5名俄罗斯人已遭逮捕，罪名是涉嫌走私宝石。

山东省人大常委会表决许可逮捕“下跪”副市长。
临时政府当局将在宰牲节后立刻拘捕沙拉比

醉酒男子5小时恶意报警293次被治安拘留

美囚禁一涉嫌与“基地”有关联者引发激烈争论。

小贝家盗贼被判七月监禁

英死囚肯尼思·里奇被美监禁18年后可能无罪释放

5.8.2 Release-Parole
A RELEASE event occurs whenever a state actor (GPE, ORGANIZATION subpart, or PERSON representative) ends its custody of a PERSON entity. This can be because the sentence has ended; because the charges are dropped; or because parole has been granted.

美国 释 放 东 突 分 子

新闻媒体报导说，至少还有另外两名良心犯也将获释

十几名符合假释条件的服刑人员，在领取了法院假释裁定书后与他们的家人团聚被假释回家。

5.8.3 Trial-Hearing
A TRIAL event occurs whenever a court proceeding has been initiated for the purposes of determining the guilt or innocence of a PERSON, ORGANIZATION or GPE accused of committing a crime.

A HEARING event occurs whenever a state actor (GPE, ORGANIZATION subpart, or PERSON representative) officially gathers to discuss some criminal legal matter.

A TRIAL-HEARING event can have a CRIME attribute filled by a string from the text. It is important that the PROSECUTOR-ARG be a state actor (GPE, ORGANIZATION subpart or PERSON representing them).

Examples

伊前政府官员审判“化学阿里”先行“萨达姆”断后。

百万富翁“吴士民及其堂弟吴士伟，因涉嫌绑架、故意杀人等罪名，被检察机关送上法庭

福州首富陈凯一审判死刑。
5.8.4 Charge-Indict

A *CHARGE* event occurs whenever a PERSON, ORGANIZATION or GPE is accused of a crime by a state actor (GPE, an ORGANIZATION subpart of a GPE or a PERSON representing a GPE).

An *INDICT* event occurs whenever a state actor (GPE, ORG subpart of a GPE or PERSON agent of a GPE) takes official legal action to follow up on an accusation.

A *CHARGE-INDICT* event can have a *CRIME-ARG* attribute filled by a string from the text.

**Examples**

网易前高管被**指控**违规交易。

俄友谊大学代校长被**指控**违反消防安全规定。

…也被检察机关同案提起**公诉**。

联合国的战争罪行法庭**控告**米洛舍维奇在科索沃战争中违反人道罪。

秘鲁国会 10 月 30 日晚通过决议，给前总统藤森增加一项**指控**，控告他非法支付给当时的情报局长蒙特西诺斯 1500 万美元。

5.8.5 Sue

A *SUE* event occurs whenever a court proceeding has been initiated for the purposes of determining the liability of a PERSON, ORGANIZATION or GPE accused of committing a crime or neglecting a commitment. It can have a *CRIME* attribute filled by a string from the text. It is not important that the *PLAINTIFF-ARG* be a state actor (a GPE, an ORGANIZATION subpart or a PERSON representing them).

**Examples**

邹雪正式**起诉**赵薇要求经济赔偿并公开赔礼道歉。

中国搜索**起诉**8848，称其行为触犯良性发展底线。
5.8.6 Convict
A CONVICT event occurs whenever a TRY event ends with a successful prosecution of the DEFENDANT-ARG. In other words, a PERSON, ORGANIZATION or GPE entity is convicted whenever that entity has been found guilty of a CRIME. It can have a CRIME attribute filled by a string from the text. CONVICT events will also include guilty pleas.

Examples

阿布格莱布虐囚主角被判有罪面临最高15年监禁。

李少民被判间谍罪驱逐出境。

韩国地铁火灾继续调查 纵火犯如何定罪尚未确定

杰克逊被控9宗罪如定罪最高刑罚入狱24年

5.8.7 Sentence
A SENTENCE event takes place whenever the punishment (particularly incarceration) for the DEFENDANT-ARG of a TRY event is issued by a state actor (a GPE, an ORGANIZATION subpart or a PERSON representing them). It can have a CRIME-ARG attribute filled by a CRIME value and a SENTENCE-ARG attribute filled by a SENTENCE value.

Note: Serving a sentence will be annotated as an ARREST-JAIL event.

Examples

谢霆锋被判240小时社会服务。

原中央电视台文艺中心影视部副主任冯骥被判有期徒刑11年。

刘晓庆构成偷税罪量刑最多判七年

富豪周正毅量刑三年之谜其辩护律师另有说法

5.8.8 Fine
A FINE event takes place whenever a state actor issues a financial punishment to a GPE, PERSON or ORGANIZATION entity, typically as a result of court proceedings. It can have a CRIME attribute filled by a string from the text.

Please note that settlements (between two parties) will not be annotated as FINE events, but rather as TRANSFER-MONEY events. This will be true even when
the settlement is brought about by some other JUSTICE event (such as a SUE event).

Examples

丰田汽车公司隐瞒收入被罚款。

撒切尔之子资助非洲政变阴谋被罚款。

荷兰重拳打击垃圾邮件最高罚金8.75万欧元

制贩假火车票罚金达8730万

切拉因吐出“天价口水”罚金超过7000美元...

5.8.9 Execute
An EXECUTE event occurs whenever the life of a PERSON is taken by a state actor (a GPE, its ORGANIZATION subparts, or PERSON representatives). It can have a CRIME attribute filled by a string from the text.

Examples

6月17日，昆明市中级人民法院依法对马加爵执行死刑。

罪有应得刘涌昨在锦州市被执行死刑。

伊拉克一武装组织称已处决15名伊国民卫队士兵

四川一家银行的负责人近日被处决

5.8.10 Extradite
An EXTRADITE event occurs whenever a PERSON is sent by a state actor from one PLACE (normally the GPE associated with the state actor, but sometimes a FACILITY under its control) to another place (LOCATION, GPE or FACILITY) for the purposes of legal proceedings there.

Wherever the ORIGIN-ARG is not explicitly stated, the slot will not be filled.

Examples

赖昌星是否能被引渡尚难料加方态度很关键。

戴着手铐，身穿防弹背心的哥伦比亚大毒枭奥雷胡埃拉于3日晚斯被引渡往美国受审。
5.8.11 Acquit
An ACQUIT event occurs whenever a TRY event ends but fails to produce a CONVICT event. This will include cases where the charges are dropped by the PROSECUTOR-ARG.

Examples

企业家被疑私藏枪支入狱500天 宣告无罪获释...

因私持刀刺死不法侵害者而被以故意伤害罪提起公诉的内蒙古自治区来京的打工妹吴金艳，接到了宣告无罪的终审裁定书。

5.8.12 Appeal
An APPEAL event occurs whenever the decision of a court is taken to a higher court for review.

上诉人因 一案,不服 人民法院 年 月 日( )字第 号 书,现提出 上诉

上诉人因 一案,不服 人民法院 年 月 日( )字第 号 书,现提出 上诉

27日，原告方不服东京高院作出的维持一审判决的裁定，将此案上诉至最高法院。

5.8.13 Pardon
A PARDON event occurs whenever a head-of-state or their appointed representative lifts a sentence imposed by the judiciary.

Example

巴基斯坦军方表示不会赦免中国人质事件主谋。

俄罗斯议会通过普京提交的赦免车臣武装分子法案。

6 Event Arguments
Event arguments will be taggable just in case they occur within the scope of the corresponding event. This is another way of saying that any taggable event argument will occur in the same sentence as the trigger word for its event.

6.1 Introduction to Event Arguments
We begin with a brief discussion of the different kinds of Arguments.

Event Participants:
Most event arguments will be participants in the event. These will be taggable entities that are somehow involved in the event. For each type and subtype of
event, there will be a specific set of participant roles that can be filled. The following subsections indicate what the possible participant roles are for each event subtype, and how to interpret each.

**Event Attributes:**
In addition to participants, there are two kinds of attributes that can be associated with events (as arguments):

Event-Specific Attributes such as the CRIME-ARG and SENTENCE-ARG for JUSTICE events and the POSITION-ARG for PERSONNEL events. In both cases, the argument slot can be filled by values identified within the scope of the event (CRIME and JOB-TITLE, respectively). For a complete discussion of value annotation, please see the Values Guidelines. The complete list of Event-Specific Attributes, their associated event types, their associated value types and their interpretations is as follows:

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Event Type</th>
<th>Value</th>
<th>Interpretation</th>
</tr>
</thead>
<tbody>
<tr>
<td>CRIME-ARG</td>
<td>JUSTICE</td>
<td>CRIME</td>
<td>The crime for which the Justice event has been undertaken</td>
</tr>
<tr>
<td>POSITION-ARG</td>
<td>PERSONNEL</td>
<td>JOB-TITLE</td>
<td>The job which the PERSONNEL event is concerned with</td>
</tr>
<tr>
<td>SENTENCE-ARG</td>
<td>JUSTICE.SENTENCE</td>
<td>SENTENCE</td>
<td>The sentence that has been leveled against the DEFENDANT-ARG following conviction</td>
</tr>
</tbody>
</table>

General Event Attributes such as PLACE-ARG and TIME-ARG which will readily apply to most (if not all) events and be interpreted in precisely the same way each time. For example, the TIME-ARG will **always** indicate the time at which the event took (or will take) place. The complete list of General Event Attributes and their interpretations is as follows:

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Interpretation</th>
</tr>
</thead>
<tbody>
<tr>
<td>PLACE-ARG</td>
<td>Where the event takes place</td>
</tr>
<tr>
<td>TIME-ARG</td>
<td>When the event takes place</td>
</tr>
<tr>
<td>DURATION-ARG</td>
<td>The length of time that an event takes</td>
</tr>
</tbody>
</table>
There will be some (event-specific) **participants** that may be easily confused with these **attributes**. For example, the **ORIGIN-ARG** and **DESTINATION-ARG** in **TRANSPORT-ARTIFACT** events are themselves ‘places’, but have their own specialized interpretation and should not be confused with the **PLACE-ARG** that is seen in other events. We will clarify each of these cases as they emerge in our presentation of event participants below.

**A caveat: Attributes and Participants are all just Arguments**

In the subsections which follow, we have included all possible arguments (participants and both kinds of attributes) in the same table. We will refer to these two properties of events collectively as **arguments**.

**6.1.1 Event Argument Taggability**

*We will only tag as arguments those entities and values that occur within the scope of the event.*

**Arguments and Modality:**

We will annotate arguments regardless of the modal certainty of their involvement in the indicated event.

In the following example, *Einhorn* will be an argument (AGENT-ARG) in the expressed **DIE** event.

*Einhorn was accused of killing Maddux*

And in:

*India blamed Islamic militants for the attack*

The entity mention *militants* are taggable as an argument in the **ATTACK** event expressed by *attack*.

**Reasonable Reader Rule:**

An entity or value will be accessible as an argument in a given event only if there is no reasonable interpretation of the sentence in which the argument is not involved (at the world defined by the respective modality).

**Shared Arguments:**

In the case where an entity or quantity is clearly an argument to another event mention in the sentence, but it also applies quite reasonably to another event mention in the sentence, it should be annotated as an argument of both event
mentions. In the examples which follow, the argument *underlined* should attach to both mentions in *bold*.

*The explosion* in Lahore caused a fire that burned makeshift stalls and *wounded* 36 people.

*Bombs went off* in three Pakistani cities Monday, *injuring* 45 people.

*Carruth, 26, could be executed if convicted of masterminding the shooting.*

**A note about PLACE-ARGS:**

An entity mention is taggable as a PLACE-ARG even if the event happens at or near the place in question.

*A car bomb went off outside army headquarters*

### 6.1.2 Events as ‘Blocking Categories’:

Sometimes, an event will be mentioned along with a number of its sub-events:

1. Six *murders* occurred in France, including the *assassination* of Bob and the *killing* of Joe.

2. Six men were *murdered*, including Bob (in Paris) and Joe (in Reims).

In cases where a sub-event ‘X’ is mentioned in the scope of some ‘larger’ event ‘Y’ (which is a set of such sub-events), then we will mark all possible valid arguments of Y *except* when you would have to explicitly promote an argument through an annotated event X to apply it to the set of events Y that contains X.

As such, we get:

1. Six *murders* occurred in France, including the *assassination* of Bob and the *killing* of Joe.

    Murders (France)
    Assassination (Bob, France)
    Killing (Joe, France)

2. Six men were *murdered*, including Bob (in Paris) and Joe (in Reims).

    Murdered (six men, Bob, Joe, Paris, Reims)
6.1.3 Examples Formatting:
In the examples in the subsections to follow, triggers are indicated in **bold** and the relevant arguments are indicated using **bold font** and square brackets.

All of the arguments available to each event subtype will be presented in each table as follows:

<table>
<thead>
<tr>
<th>First-Arg</th>
<th>ENTITY TYPES</th>
<th>Description of First-Arg</th>
<th>[first-arg example] text trigger</th>
</tr>
</thead>
<tbody>
<tr>
<td>Second-Arg</td>
<td>ENTITY TYPES</td>
<td>Description of Second-Arg</td>
<td>[second-arg example] text trigger</td>
</tr>
<tr>
<td>Third-Arg</td>
<td>ENTITY TYPES</td>
<td>Description of Third-Arg</td>
<td>[third-arg example] text trigger</td>
</tr>
</tbody>
</table>

6.2 Life

6.2.1 Be-Born

BE-BORN events have one participant slot (PERSON-ARG) and two attribute slots (TIME-ARG and PLACE-ARG).

<table>
<thead>
<tr>
<th>Person-Arg</th>
<th>PER</th>
<th>The person who is born</th>
<th>[李傻傻], 原名蒲荔子, 生于1981年11月, 湖南隆回人。</th>
</tr>
</thead>
<tbody>
<tr>
<td>Time-Arg</td>
<td>TIME-within</td>
<td>When the birth takes place</td>
<td>李傻傻, 原名蒲荔子, 生于1981年11月, 湖南隆回人。</td>
</tr>
<tr>
<td>Place-Arg</td>
<td>GPE LOC FAC</td>
<td>Where the birth takes place</td>
<td>譬如出生在[北京], 叫&quot;京生&quot;; 出生在[台湾], 叫&quot;台生&quot;</td>
</tr>
</tbody>
</table>

6.2.2 Marry

MARRY events have one participant slot (PERSON-ARG) and two attribute slots (TIME-ARG and PLACE-ARG).

<table>
<thead>
<tr>
<th>Person-Arg</th>
<th>PER</th>
<th>The people who are married</th>
<th>2003年10月18日, [天津师范大学大三学生王洋]同[她的未婚夫天津大学博士生刘航]领取了结婚证书, 五月一日, [王洋]举行了婚礼。</th>
</tr>
</thead>
</table>
6.2.3 Divorce

DIVORCE events have one participant slot (PERSON-ARG) and two attribute slots (TIME-ARG and PLACE-ARG).

| Person-Arg | PER | The people who are divorced | 离婚女向前夫讨宠物探视权。 |
| Time-Arg | TIME-within | When the divorce takes place | 饭岛直子[去年]离婚后，绯闻传个不停。 |
| Place-Arg | GPE LOC FAC | Where the divorce takes place |  |

6.2.4 Injure

INJURE events have three participant slots (AGENT-ARG, VICTIM-ARG, and INSTRUMENT-ARG) and two attribute slots (TIME-ARG and PLACE-ARG).

| Agent-Arg | PER ORG GPE | The attacking agent, The one that inacts the harm | [北京男子]杀死出墙妻藏尸冰柜三年。 |
| Victim-Arg | PER | The harmed person(s) | 长春打假英雄办公室内被杀 |
| Instrument-Arg | WEA VEH SUB | The device used to inflict the harm | 走出千米左右，魏泽突然拿[刀]连扎梁维琪3刀，之后抽刀逃跑。 |
| Time-Arg | TIME- | When the injuring takes place | [公元2004年6月5 |
| Agent-Arg | PER ORG GPE | The attacking agent, The killer | 美国认为"恐怖分子"应对俄人质死亡负责。 |
| Victim-Arg | PER | The person(s) who died | 美国认为恐怖分子应对[俄人质]死亡负责。 |
| Instrument-Arg | WEA VEH SUB | The device used to kill |  |
| Time-Arg | TIME-within | When the death takes place | 孙是3月17日晚被收容的，[3月20日]死亡。 |
| Place-Arg | GPE LOC FAC | Where the death takes place | 香港卫生福利及食物局局长杨永强6月7日宣布辞职，为非典在[香港]造成299人死亡负责。 |

6.2.5 Die

**DIE** events have three participant slots (AGENT-ARG, VICTIM-ARG, and INSTRUMENT-ARG) and two attribute slots (TIME-ARG and PLACE-ARG).

| Place-Arg | GPE LOC FAC | Where the injuring takes place | 公元2004年6月5日，[安徽宿州南10公里的桃园矿]发生一起凶杀案。被害者为一14岁的男孩，被杀的地点位于他家的唯一一张床上。 |

| Place-Arg | GPE LOC FAC | Where the death takes place | 香港卫生福利及食物局局长杨永强6月7日宣布辞职，为非典在[香港]造成299人死亡负责。 |
While the \textit{AGENT-ARG} is available for \textit{DIE} events, it is not required. Agenthood is not criterial for us, so we will tag all deaths, leaving the \textit{AGENT-ARG} slot empty wherever necessary.

<table>
<thead>
<tr>
<th>Agent-Arg</th>
<th>PER ORG GPE</th>
<th>The attacking agent, the killer</th>
</tr>
</thead>
<tbody>
<tr>
<td>Victim-Arg</td>
<td>PER</td>
<td>The person who died</td>
</tr>
<tr>
<td>Instrument-Arg</td>
<td>WEA VEH SUB</td>
<td>The device used to kill</td>
</tr>
<tr>
<td>Time-Arg</td>
<td>TIME-within</td>
<td>When the death takes place</td>
</tr>
<tr>
<td>Place-Arg</td>
<td>GPE LOC FAC</td>
<td>Where the death takes place</td>
</tr>
</tbody>
</table>

\textbf{6.3 Movement}

\textbf{6.3.1 Transport}

\textit{TRANSPORT} events have six participant slots (\textit{TRANSPORTER-ARG}, \textit{ARTIFACT-ARG}, \textit{VEHICLE-ARG}, \textit{PRICE-ARG}, \textit{ORIGIN-ARG}, and \textit{DESTINATION-ARG}) and one attribute slot (\textit{TIME-ARG}).

For the arguments of \textit{TRANSPORT} events, we will adopt the following conventions:

1. Any vehicle used is \textit{VEHICLE-ARG};

2. Any other artifact (other than the vehicle doing the transporting) is \textit{ARTIFACT-ARG};

3. Any passenger on a vehicle is \textit{ARTIFACT-ARG};

4. Any person moving about by some unspecified means is \textit{ARTIFACT-ARG} (e.g. \textit{He fled the state});

5. Any entity explicitly directing the movement of another entity is \textit{TRANSPORTER-ARG}, including pilots and drivers.
**Special case:** any general mention of the people in a vehicle is ARTIFACT-ARG (even if the group might include a driver/pilot)

<table>
<thead>
<tr>

6.4 Transaction

6.4.1 Transfer-Ownership

TRANSFER-OWNERSHIP events have five participant slots (BUYER-ARG, SELLER-ARG, BENEFICIARY-ARG, ARTIFACT-ARG, and PRICE-ARG) and two attribute slots (TIME-ARG and PLACE-ARG)

This type will be used both for sales of ‘items’ (VEHICLE, WEAPON and FACILITY) and of ORGANIZATIONS.

<table>
<thead>
<tr>
<th>Buyer-Arg</th>

<td>TIME</td>
<td>When the merger takes place</td>
<td></td>
</tr>
<tr>
<td>Place-Arg</td>
<td>GPE LOC FAC</td>
<td>Where the merger takes place</td>
<td></td>
</tr>
</tbody>
</table>

#### 6.5.3 Declare-Bankruptcy
**DECLARE-BANKRUPTCY** events have one participant slot (**ORG-ARG**) and two attribute slots (**TIME-ARG** and **PLACE-ARG**).

<table>
<thead>
<tr>
<th>Org-Arg</th>
<th>ORG</th>
<th>The organization declaring bankruptcy</th>
<th>在未能就重建规划与工会达成一致后，[大宇公司]宣布破产。</th>
</tr>
</thead>
<tbody>
<tr>
<td>Time-Arg</td>
<td>TIME</td>
<td>When the bankruptcy is declared</td>
<td>对昔日的荣华，李云福不愿多提，[两年多前]生意上一次失误，让他<strong>失去了</strong>所有的财产。</td>
</tr>
<tr>
<td>Place-Arg</td>
<td>GPE</td>
<td>Where the declaration takes place</td>
<td></td>
</tr>
</tbody>
</table>

**6.5.4 End-Org**

**END-ORG** events have one participant slot (**ORG-ARG**) and two attribute slots (**TIME-ARG** and **PLACE-ARG**).

<table>
<thead>
<tr>
<th>Org-Arg</th>
<th>ORG</th>
<th>The organization that is ended</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Time-Arg</td>
<td>TIME</td>
<td>When the event takes place</td>
<td></td>
</tr>
<tr>
<td>Place-Arg</td>
<td>GPE</td>
<td>Where the event takes place</td>
<td></td>
</tr>
</tbody>
</table>

**6.6 Conflict**

**6.6.1 Attack**

**ATTACK** events have three participant slots (**ATTACKER-ARG**, **TARGET-ARG** and **INSTRUMENT-ARG**) and two attribute slots (**TIME-ARG** and **PLACE-ARG**).

**Decision Rules: Distinguishing** **PLACE-ARG** **from** **TARGET-ARG**

For **ATTACK** events:

1. **GPE** and **LOCATION** entities can only be tagged as **PLACE-ARGs**.

2. A **FACILITY** or **VEHICLE** entity will always be tagged as a **TARGET-ARG**, unless:
A. the entity in question is not a plausible target of such an 
ATTACK event (e.g. one does not shoot a café or stab a building); 
or

B. there is a more explicit target that is also a legal participant of 
some mention of the ATTACK event (e.g. if a gunman shoots a 
woman in her Mercedes, she is a more explicit target than her car).

Note: The more explicit TARGET-ARG must be a legal participant of the 
ATTACK in question, so if a café bombing kills three people, “three people” is 
only a participant of the DIE event, not the ATTACK event itself, so café is still a 
TARGET of the ATTACK.

Given these rules, some examples would be as follows.

The bombing in Baghdad (Place)

The bombing in the café (Target)

In Baghdad (Place), the café (Target) was bombed

The terrorists attacked the café (Target)

The café (Place) stabbings

Gunfire in the café (Place)

The gunmen shot the businessman (Target) in the café (Place)

The car (Target) exploded in the parking garage (Place)

The parking garage (Target) explosion

The car (Target) bomb

The café (Target) bombing killed three people

<table>
<thead>
<tr>
