Serving the humanities: daydreams and nightmares

Steven Krauwer
CLARIN ERIC
Overview

- CLARIN in a nutshell
- The dream
- The vision
- Phasing
- CLARIN ERIC
- The nightmares
- Action lines
- The future of language resources
CLARIN in a nutshell

- Common Language Resources and Technology Infrastructure (http://www.clarin.eu)

- Basic idea:
  - European federation of digital repositories with language data and tools (text, speech, multimodal, gesture …)
  - with access to language and speech technology tools through web services to retrieve, manipulate, enhance, explore and exploit data
  - with uniform single sign-on access to archives and tools
  - target audience humanities and social sciences scholars
  - to cover all EU and associated countries
  - and all languages relevant for target audience
The CLARIN dream

- give me digital copies of all contemporary documents in European archives that discuss the Great Plague of England (1348-1350)
- give me all negative articles about Islam or about soccer in the Slovenski Narod daily newspaper (1868-1943)
- find European TV news interviews that involve speakers with a Bavarian accent
- summarize all articles in European newspapers of August 2010 about OCR – in Finnish
- show me the pronoun systems of the languages of Nepal
The vision: the role of language

- Language is at the heart of many disciplines in the Humanities and Social Sciences (HSS), e.g.
  - as an object of study
  - as a means of human communication
  - as a means of human expression
  - as a record of our history
  - as part of one’s cultural identity
  - as carrier of knowledge and information
- CLARIN wants to support them all
- Language and speech technology are part of this (e.g. in the form of computational linguistics or speech science) – but just a part!
The vision: what CLARIN wants to offer

- CLARIN makes it possible for the researcher to find resources (metadata search), and to refer to them in a persistent way (persistent identifiers)
- CLARIN allows for content search in and across collections
- CLARIN offers access to web services and workflows to perform complex linguistic & content operations and visualisations
- CLARIN covers both historical and contemporary language material in all modalities
- CLARIN serves both expert and non-expert users
- CLARIN offers access to depositing and long term preservation services
Phasing of CLARIN

- Does CLARIN exist? Yes and no.
- 2008-2011: CLARIN Preparatory Phase Project, EC funded
  Goal: *designing the infrastructure technically and organisationally, and lining up the players*
- 2012-2015 Construction Phase, jointly funded by the participating countries, no EC funding
  Goal: *building the European infrastructure*
- 2015-…: Exploitation Phase, jointly funded by the participating countries, no EC funding
  Goal: *making and keeping it running, populating it, and ensuring that it follows new trends in technology and research*
CLARIN ERIC

- CLARIN ERIC is the governance and coordination body, but will not run or fund operational data services
- An ERIC is a new type of intergovernmental legal entity, created by the EC, essentially a consortium of countries, with no end point
- CLARIN ERIC member countries pay a modest annual fee
- Countries will each set up a national CLARIN consortium, that will provide data and linguistic services and create data and tools
- It is up to the countries to decide how to shape and fund their CLARIN consortia and how to relate them to other activities at the national level (e.g. research programmes, digitisation programmes, etc)
- CLARIN ERIC established by the EC on Feb 29th 2012, with 9 founding members: AT, BG, CZ, DE, DK, EE, NL, PL, DLU
- More in the pipeline – but we want all European countries in!
What is so nice about ERICs?

- They are legal entities, not projects, which helps to make them more sustainable
- Members are governments, committing themselves for longer periods of time (min. 5 years)
- CLARIN ERIC is a sign of recognition by governments and EC of the importance of sharing language resources
- Closeness to funding agencies may help to enforce use of standards and sharing of data in projects they fund
- Good starting point for international collaboration as third countries can join or make collaboration agreements (e.g. through agencies or data centres)
- ERICs may submit proposals for EC funding

**But:** bulk of the funding dependent on funding mechanisms and cycles in participating countries
The CLARIN nightmare (1)

- give me digital copies of all contemporary documents in European archives that discuss the Great Plague of England (1348-1350)
- give me all negative articles about Islam or about soccer in the Slovenski Narod daily newspaper (1868-1943)
- find European TV news interviews that involve speakers with a Bavarian accent
- summarize all articles in European newspapers of August 2010 about OCR – in Finnish
- Show me the pronoun systems of the languages of Nepal
The CLARIN nightmare (2)

- *give me all negative articles about Islam or about soccer in the Slovenski Narod daily newspaper (1868-1943)*
- Newspapers are commercial products – are we sure that we can access them freely?
- Many digitized newspapers are just pictures – how can we analyze their structure, and do we have usable OCR to read them?
- Topic and attitude extraction tools exist – but do they exist for Slovak, do they fit together and will the same tools still be available in 5 years time?
- How to formulate such a query without technical knowledge?
The CLARIN nightmare (3)

- Do HSS scholars realize at all that they should be interested in these things?
  - Some do, most don’t; we should make an effort to show them the potential benefits of adopting these new methods
  - Showcases and visualisation tools are indispensable
  - Distinguish between lost and future generation

- Are the tools offered by language and speech technology the answers to the problems of HSS scholars as they see them?
  - Technologists have a strong tendency to offer more and better gearboxes to people who are just waiting for a bus with comfortable seats
  - Use and adaptation of existing tools may always require intervention by technologically skilled people
CLARIN’s answer: Action lines (1)

- Coverage: consolidate 9 members, reach out to others, 15 members in 3 years, 20 in 5 years
- Legal: common license templates promoted for new and legacy data, collaborate with others, talk to legislators about IPR, establish Access and Authentication for single sign-on
- Integration of data: standards action plan, tools for mapping, tools for curation; identify priority areas for cross border research
- Integration of services: interoperability, identify chainable services, work on showcases that convince potential users
- Preservation: identify at least 1 centre per country, work on change of culture, follow broader data initiatives; in 3 years all data and tools from funded projects deposited
CLARIN’s answer: Action lines (2)

- **Ease of access:** Knowledge Sharing Infrastructure to support ease of access, awareness, training & support, curricula development, centres of expertise; Portal targeting different audiences; emphasis on interfaces and visualization

- **Crossing borders:** use language as vehicle to collaborate with other disciplines; inter-Research Infrastructure and international collaboration; explore industrial collaboration models

- **Sustainability:** demonstrate societal impact; review sustainability models; after 3 years vision and strategy
The future of language resources

- There is still a lot of work to do – but it is good to realize that CLARIN is not a project: it has a start but no fixed end
- Legacy resources need to be upgraded, new resources should comply with community standards from the start
- Further development of language and speech technology for all languages (from big to small) is essential, but it should be kept in mind that proven technologies may not work for older variants of languages, and require adaptation
- Much effort needed to ensure adoption of digital methods in the humanities and social sciences (education, showcases, visualisation)
- None of the problems above are local to Europe – international collaboration is the best way forward
Congratulations LDC!
